

Natural language processing in ML

Say some features are completely made of text
 eg: Spam/Ham classification

Email Subject	Email Body	Spam(1)/Ham(0)
Billionaire	you won lottery of Billion \$	1

Model can not understand text
 we have technique to convert text to vector

Roadmap for NLP

Tokenization in NLP

Topic

- 1) Corpus $\rightarrow$ Paragraph
- 2) Documents $\rightarrow$ Sentences
- 3) Vocabulary $\rightarrow$ unique words
- 4) Words $\rightarrow$ All words in corpus

Tokenization

Corpus { "My name is Aditya
and have interest in teaching ML, NLP
& DL". I am data engineer.

$\Downarrow$
Tokens

Token { Sentences }

- ① My name is Aditya and have Interest in teaching ML, NLP & DL
- ② I am data engineer.

$\Downarrow$
Token { words }

Word can also be
token & sentence
can also be token

$\rightarrow$ Paragraph

[I like to drink apple juice. My friend likes mango juice]

$\Downarrow$ Token (Sentences)

- ① I like to drink apple juice
- ② My friend likes Mango juice.

Token $\hookrightarrow$ Unique words = 10
(Vocabulary)
