

Ensemble techniques -

Bagging & Boosting -

- Combines multiple machine learning algorithms

Bagging:

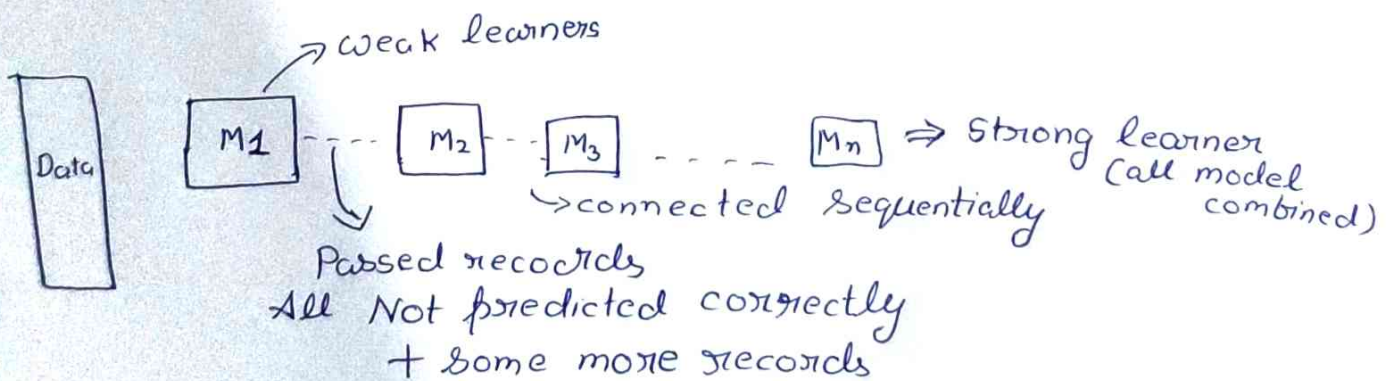

New test data $\rightarrow$ will go to all algo $\rightarrow$ Voting Majority

In case of regression final output is average of all outputs

All base learners are getting trained parallelly
Analogy: All models are good with subset of data feeded

Boosting:

Analogy $M_1 \rightarrow$ good in physics
 $M_2 \rightarrow$ good in maths
